PROFESSIONAL SUMMARY

Final-year IT engineering student with hands-on experience building React.js and React Native apps during my internship at One Smarter, Inc. Comfortable working across the stack — building UI components, wiring up REST APIs, and picking up whatever the project needs. Looking for a full-time frontend/full-stack role where I can keep building real products.

EXPERIENCE

Programming & Development Intern — One Smarter, Inc. (USA) *Remote*

- Built responsive screens for the Claim Member OS platform using React.js and Vite — mostly claims-related UI that needed to work well on both desktop and mobile.
- Wrote reusable React components and worked with the backend team to wire up API calls, so features didn't need to be rebuilt for every screen.
- Built out several screens for the mobile version of the app in React Native, matching the same functionality across Android and iOS.
- Pulled and organized lead/company data using Apollo.io for the team's market research — mostly cleaning and structuring raw exports into usable datasets.

EDUCATION

B.E.inInformation Technology—ShriSantGajananMaharajCollegeofEngineering,Shegaon *CGPA: 7.34 / 10*

PROJECTS

PortfolioWebsite
React.js · Vite · JavaScript · HTML · CSS · GitHub

- Built and deployed my own portfolio site to showcase projects and certifications, instead of using a template — wanted full control over layout and how it looked.
- Focused on it working properly on mobile too, since most people were going to open the link from a phone.
- Added a contact section and organized everything so someone skimming it quickly can find what they need.

Student Query Management Mobile Application
React Native · JavaScript · REST APIs · Postman

- Built the mobile frontend that lets students submit queries and track their status instead of following up over email or in person.
- Made the components reusable so adding a new query type or status didn't mean rebuilding screens from scratch.
- Tested the API calls in Postman before wiring them into the app, which caught a few issues with data formatting early.

TECHNICAL SKILLS

Languages: Java, JavaScript
Frameworks & Libraries: React.js, React Native, Node.js, Express.js
Databases: MySQL, MongoDB
Tools & Technologies: Git, GitHub, Postman, Vite, Linux, REST APIs

CERTIFICATIONS

- DSA in Java — Apna College
- Full Stack Web Development — Apna College
- Postman API Fundamentals — Student Expert

LEADERSHIP & ACTIVITIES

- Associate Team Lead, Mozilla Open Source Community — SSGMCE, Shegaon
